

CU Swap Project Presentation

Dylon, Hayden, Joe, Sashi, Shon

Description: Problem

- CU students have stuff to sell but lacks a centralized platform to sell them
 - Game tickets
 - Textbooks

Description: Solution

- Centralized platform
- Exclusive to CU students
- Easy to buy and sell

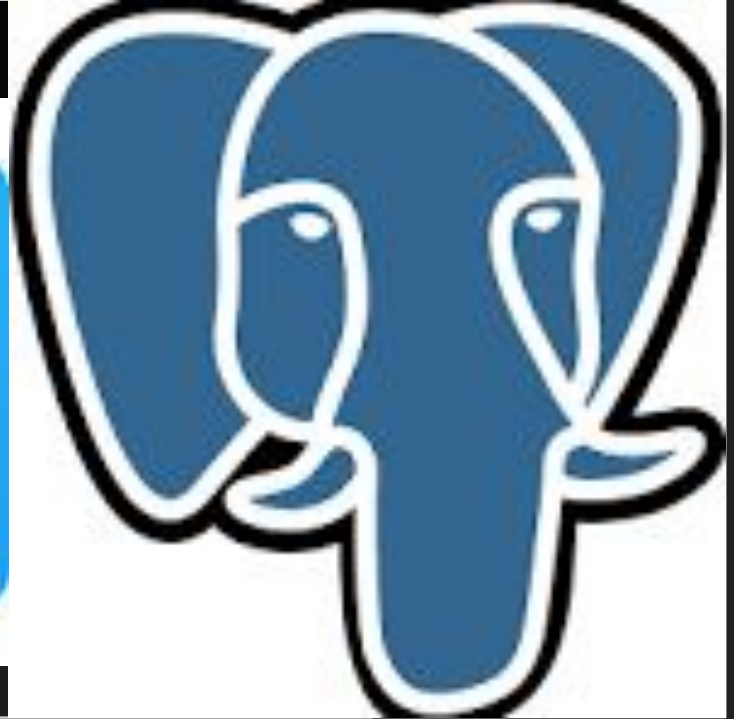

Tools Used

- Project tracker: Github - 4
- Virtual repo: Github - 5

Tools Used

- Database: Postgresql - 5
- IDE: VS Code - 5

Tools Used

- UI tools: HTML, Handlebars - 5
- Google drawing used for wireframes - 2

Google Drawings

handlebars

Tools Used

- Application Server: nodeJS - 5
- Deployment env: render - 2

Tools Used

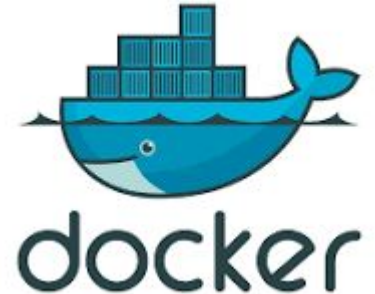

- External API's: Stripe - 5
- Package: Nodemailer - 5

Nodemailer

Tools Used

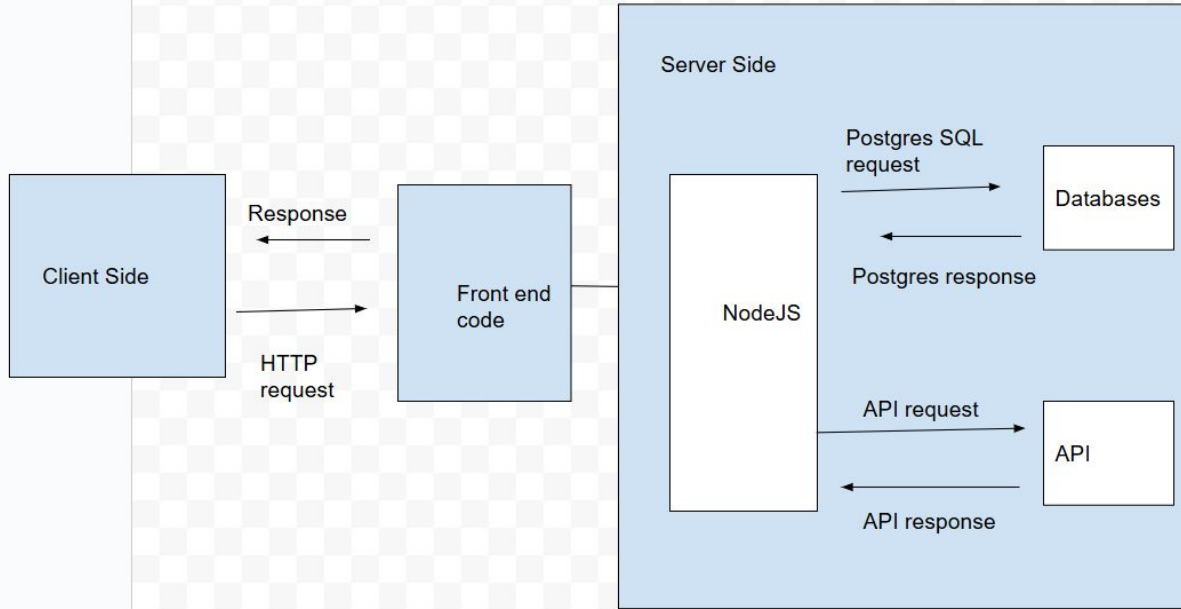

- Testing tools: mocha - 2
- Framework: express - 3
- Docker - 5

Methodologies

- Incremental
- Peer code reviews
- Met weekly on Tuesdays, and Thursdays in CSEL

Architecture Diagram

Challenges

- Front end back end teams made integration hard
- Getting Nodemailer working with render
- Making sure any new code we wrote didn't break test cases from lab 10

Future scope enhancements

- Buyer/seller messaging system
- Set up actual payment system (right now we just use test mode for stripe)
- More categories
- UI refinements

Project Demonstration
