

Feature 1.1

Scenario 1. Payment platform succeeding.

Description:

Buyer pays \$20 the website adds the transaction to their history, and then pays out the Seller \$20

Test Data:

- Amount: \$20
- Connected account: Testing_user
- Card: 4242 4242 4242 4242 / any future expiry / any CVV
- User Email: ABCD1234@colorado.edu

Environment:

- Stripe test mode: API-hosted Checkout page
- Branch: Payment testing

Expected Results:

- PaymentIntent: status = succeeded

Tester Profile:

User navigates UI in order to make a purchase on the off-site checkout page.

Feature 1.2

Scenario 2. Payment platform failure.

Description:

Buyer fails to pay; a \$20 declined transaction pop-up appears and asks them if they want to check out again.

Test Data:

- Amount: \$20
- Connected account: Testing_user
- Card: 4242 4242 4242 4242 / any future expiry / any CVV
- User Email: ABCD1234@colorado.edu

Environment:

- Stripe test mode: API-hosted Checkout page
- Branch: Payment testing

Expected Results:

- PaymentIntent: status = failed
- Declined pop-up
- Redirect to checkout page

Tester Profile:

User navigates UI in order to make a failed purchase on the off-site checkout page.

Registration-Login Feature

Expected Scenario

- **Description:** a new user enters the webpage, registers themselves, and log-in using the registration credentials. The user provides **valid** information.
- **Test Data:**
 - User 1
 - Username: Ima Student
 - Password: Password
 - Phone: +1 213 555 3790
 - Email: imst2946-2@colorado.edu
 - User 2
 - Username: Touching Fish
 - Password: 1234567890
 - Phone: +86 13521011481
 - Email: gona1234@colorado.edu
- **Environment:**
 - This will be testable by having the website locally hosted
- **Expected Results:**
 - Registration and login succeed with the given test data
 - Registration success correctly redirects to login page
 - Successful registration is clear to the user
 - Reuse of credentials in registration gives an error
 - Login success redirects to discovery page
- **Tester Profile:**
 - The user inputs credentials in the registration, then the login page

Erroneous Scenario

- **Description:** a new user enters the webpage, registers themselves, and log-in using the registration credentials. The user provides **invalid** information.
- **Test Data:**
 - User 1 (invalid email domain)
 - Username: Ima Student
 - Password: Password
 - Phone: +1 213 555 3790
 - Email: example@gmail.com
 - User 2 (no password)
 - Username: Ima Student
 - Password:
 - Phone: +1 213 555 3790
 - Email: imst2946-2@colorado.edu
 - User 3 (no username)
 - Username:
 - Password: Password
 - Phone: +1 213 555 3790
 - Email: imst2946-2@colorado.edu
 - User 4 (no email)
 - Username: Ima Student
 - Password: Password
 - Phone: +1 213 555 3790
 - Email:
 - User 5 (no phone)
 - Username: Ima Student
 - Password: Password
 - Phone:
 - Email: imst2946-2@colorado.edu
 - User 6 (phone number too short)
 - Username: Ima Student
 - Password: Password
 - Phone: 2001

- Email: imst2946-2@colorado.edu

- **Environment:**

- This will be testable by having the website locally hosted

- **Expected Results:**

- Registration fails
- Failed fields are noted to the user

- **Tester Profile:**

- The user inputs credentials in the registration and clicking register generates errors.

Feature 3.1

Scenario 1. Deleting reviews

Description:

After buying a product, you are able to leave reviews, so after leaving a review, you will have access to delete the review from the seller's page.

Test Data:

- Able to remove reviews

Environment:

- Branch: Reviews_testing
- Profile page: Reviews tab.

Expected Results:

- Review removed.

Tester Profile:

User navigates UI in order to delete a review left previously.

Feature 3.2

Scenario 2. Leaving reviews

Description:

After a successful payment screen, the buyer is redirected to a "leave a review" page.

Test Data:

- Succeed pop-up
- Then the "Leave a Review" page renders

Environment:

- Branch: Reviews_testing
- Leave a Review page

Expected Results:

- Review added to my reviews page for the buyer and the seller.

Tester Profile:

User navigates UI in order to make a purchase; after a purchase is successful, it renders a "Leave a review" page, which is hidden unless a successful payment is completed. Allowing the user to leave a review, which adds to the "My Reviews" tab in their profile and adds a review to the seller's "Reviews Page."
